

UBGEN[®] SAFE-BONE[®] TITANIUM MESH

SAFE-BONE®

Customized titanium mesh for the regeneration of large bone defects

- Designed for specific clinical regeneration needs
- It reflects the specific anatomical data of the patient
- Based on DICOM images
- It can be used alone or in combination with resorbable membranes

1. CHARACTERISTICS

Non-resorbable reticular structure ensuring the success of the regeneration and maintenance of the regenerated bone volume. It is fully customized so as to obtain a precise product with thickness, shape and texture size reflecting accurately the specific anatomical data of the patient. It allows 3D planning of openings, useful for future allocation of the implants.

BENEFITS

- Speed and ease of application
- It does not require further modelling or shaping adjustments

3. CLINICAL APPLICATIONS

- Horizontal bone defects
- Vertical bone defects
